

# AFTERCARE ADVICE

## FOR MICROBLADING AND HAIRSTROKE BROWS

### IMMEDIATELY AFTER BROWS ARE DONE

- Do not touch the brows, please wash hands thoroughly and use an anti-bacterial gel.
- Do not allow water to go onto the treated area until the brows have flaked off.
- The redness will subside with a few hours and the swelling within 24 hours. In some cases there may be bruising.
- Do not pick or pull the area as this will cause pigment loss or result in infections.
- Brows will heal 40-50% lighter after the first treatment and 10% thinner.

### THREE HEALING PHASES

**Heal:** Your body will start to heal. The skin will close and you will see a thin scab which protects the area whilst healing.

**Peel:** Everyones healing process is different depending on how your body heals. In most cases it takes 7-10 days for brows to flake over, in some cases it can be up to 14 days, after the touch up appointment true colour may not be visible for up to 3 months.

**Fade:** During the healing stage in the 7-10 days your permanent makeup will be patchy and uneven, you will see a lighter hue of implanted colour underneath. Once brows have flaked off your colour will almost disappear then it takes 4-6 weeks for the colour to re appear and darken. In some cases healed brow colour will not be seen for 3 months.

During this healing time your permanent makeup cannot be re-touched until you return for your top up as this will cause infection and it takes at least 4 weeks for your permanent makeup to fully heal.

Until the brows have flaked off you must not get them wet this process normally takes 7-10 days, to help with the healing process you can apply a thin layer of healing balm using a cotton bud every other night before bed.

### NEW TREATMENTS

New treatments are a two stage procedure:-

Visit one is the base coat. Visit two perfects.

Your second visit can be booked 4-6 weeks after the first visit.

Your treatment is not deemed complete until you have had both these treatments.

In some cases certain skin types may require a second or third top up depending on how your body takes to the pigment.

### THINGS TO AVOID ON TREATED AREAS

- Do not wet brows until they have completely flaked off
- Strong chemicals/antiageing creams/chemical peels
- Avoid fake tan as this can affect your pigment colour and retention.
- Sunbeds and UV light can fade your pigment , please consider wearing an SPF to protect your brows.

To keep brows well maintained a colour boost is recommended every 6-12 months

### PRICING - Top Up/Colour Boost

6-8 Weeks Top Up  
**£40.00**

3-6 months  
**£60.00**

12 months  
**£80.00**
